COMMON PROMPTS AND AUTO SUGGESTIONS

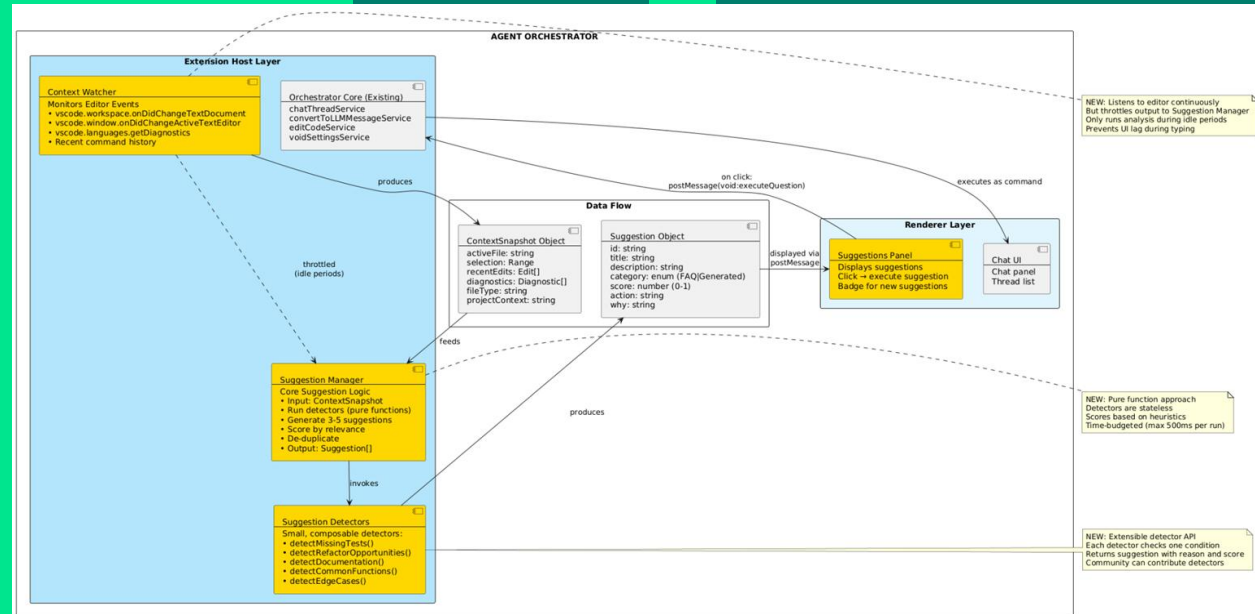

- A new menu tab which provides commonly asked questions for quick access
- Saves the user time prompting
- Generates suggested prompts by context

Stakeholders & NFRs

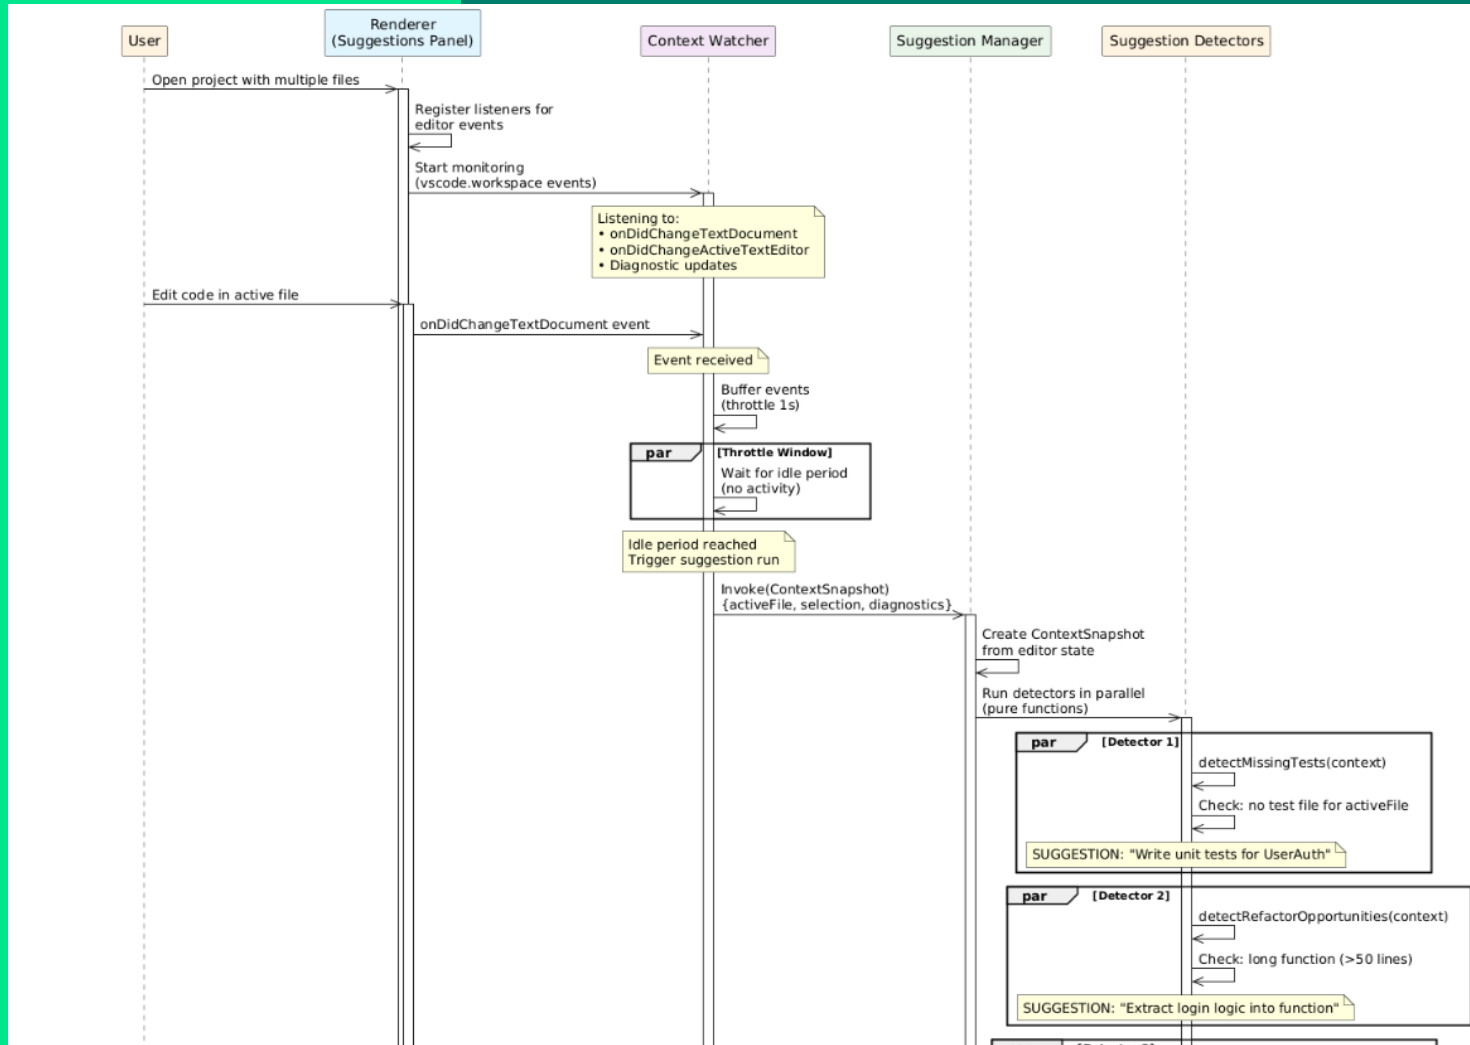

- Glass Devtools: product owner.
- Users and Contributors.
- Security
- Performance
- Maintainability
- Documentation

Changes Required

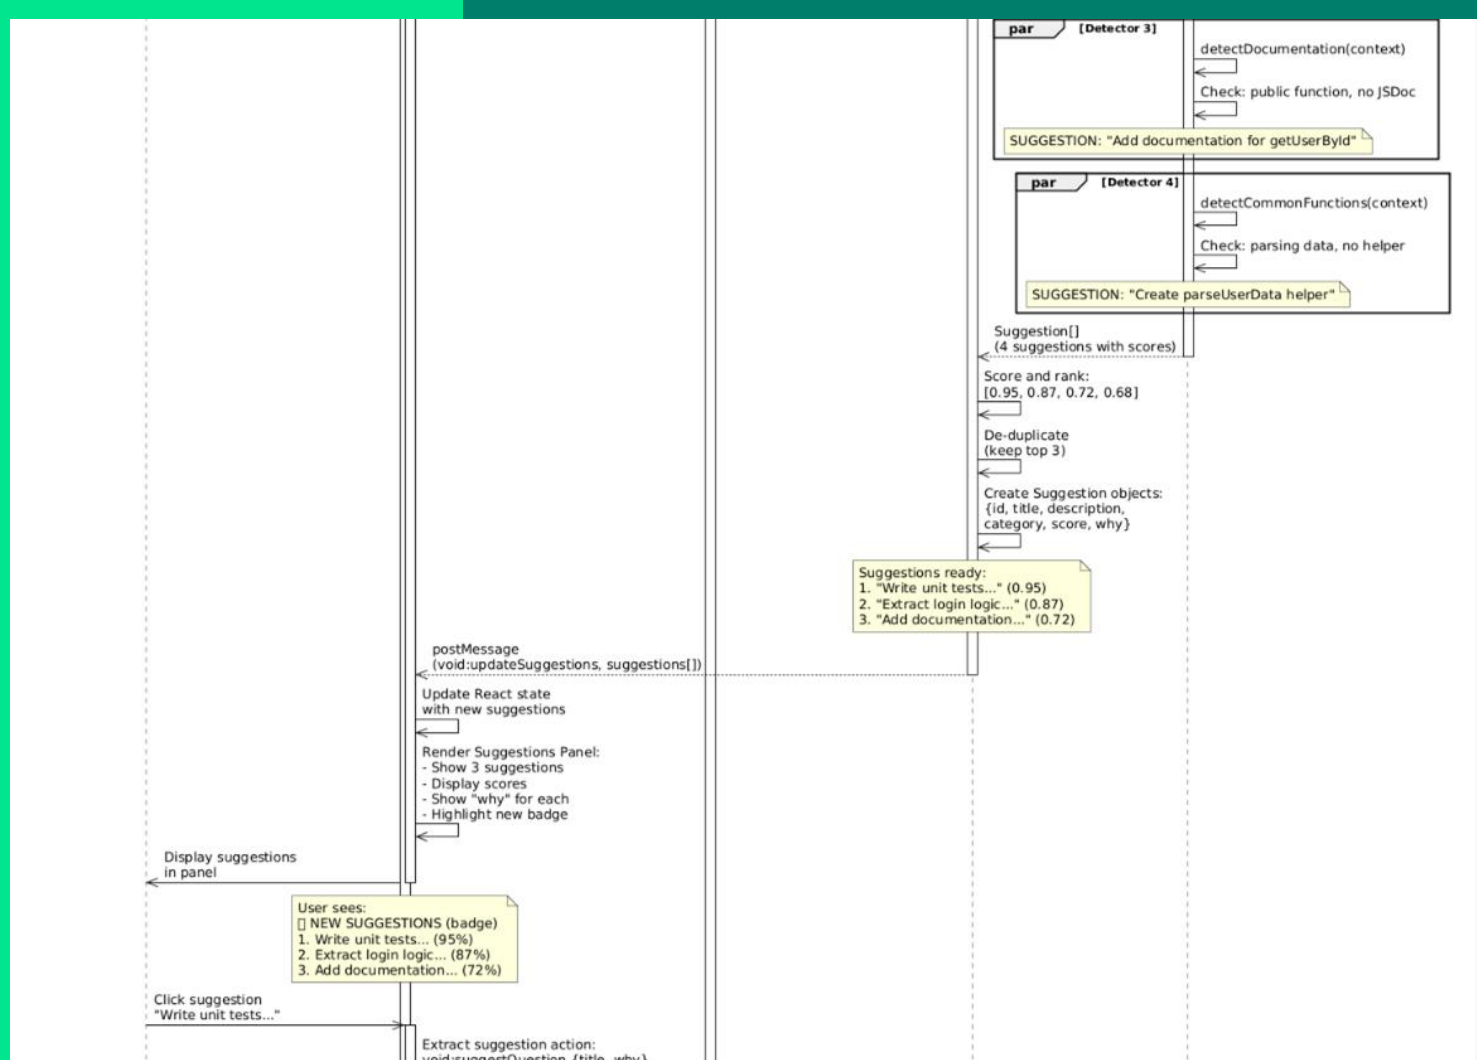

- Common & Suggested Questions panel
- Context Watcher
- Suggestion Manager

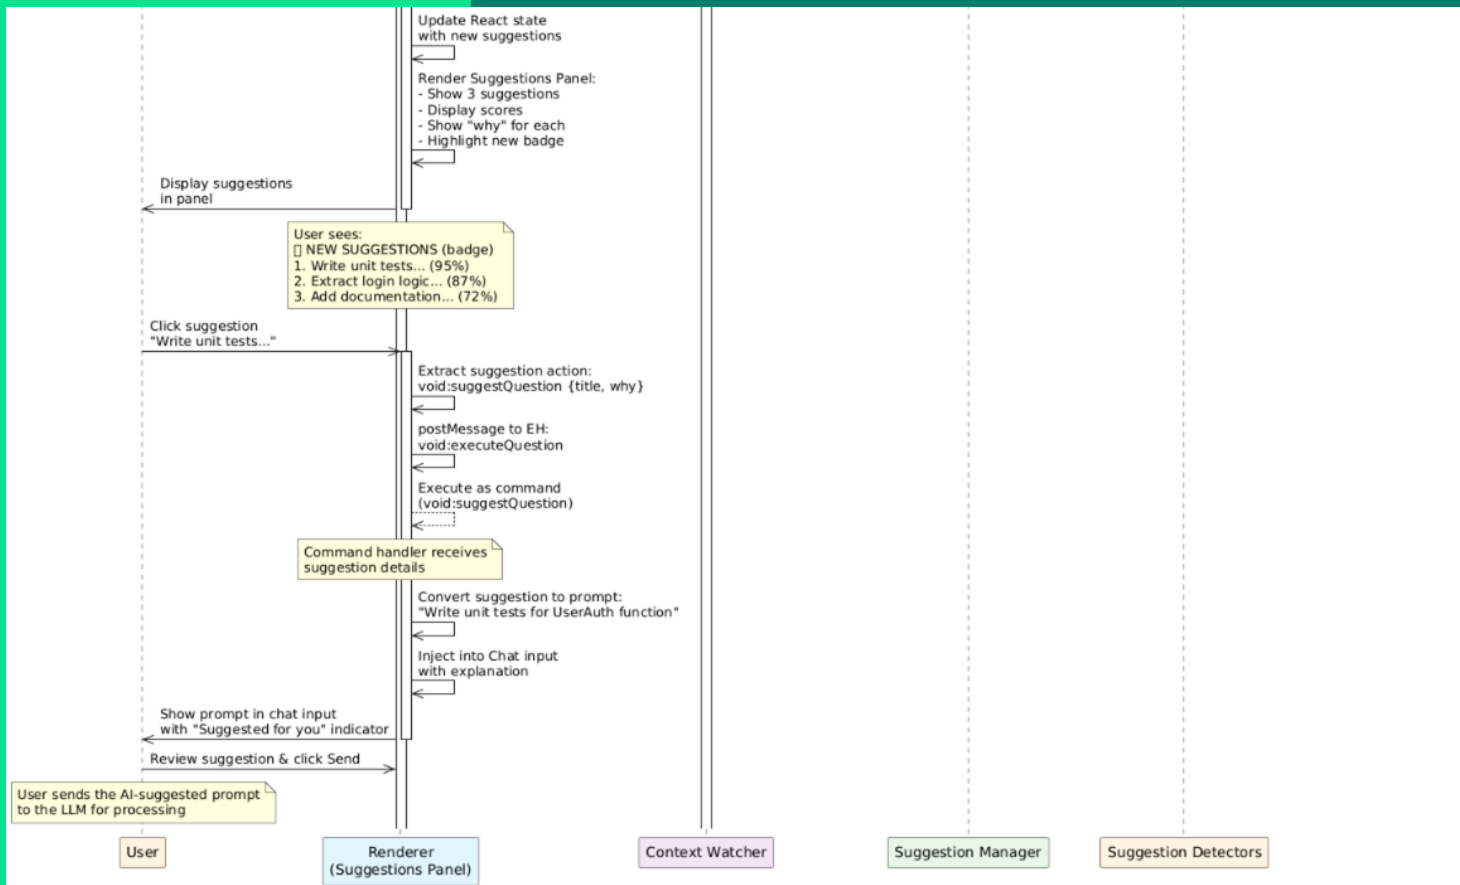

Use Case

Use Case

Use Case

Stakeholders & NFRs - How are they affected?

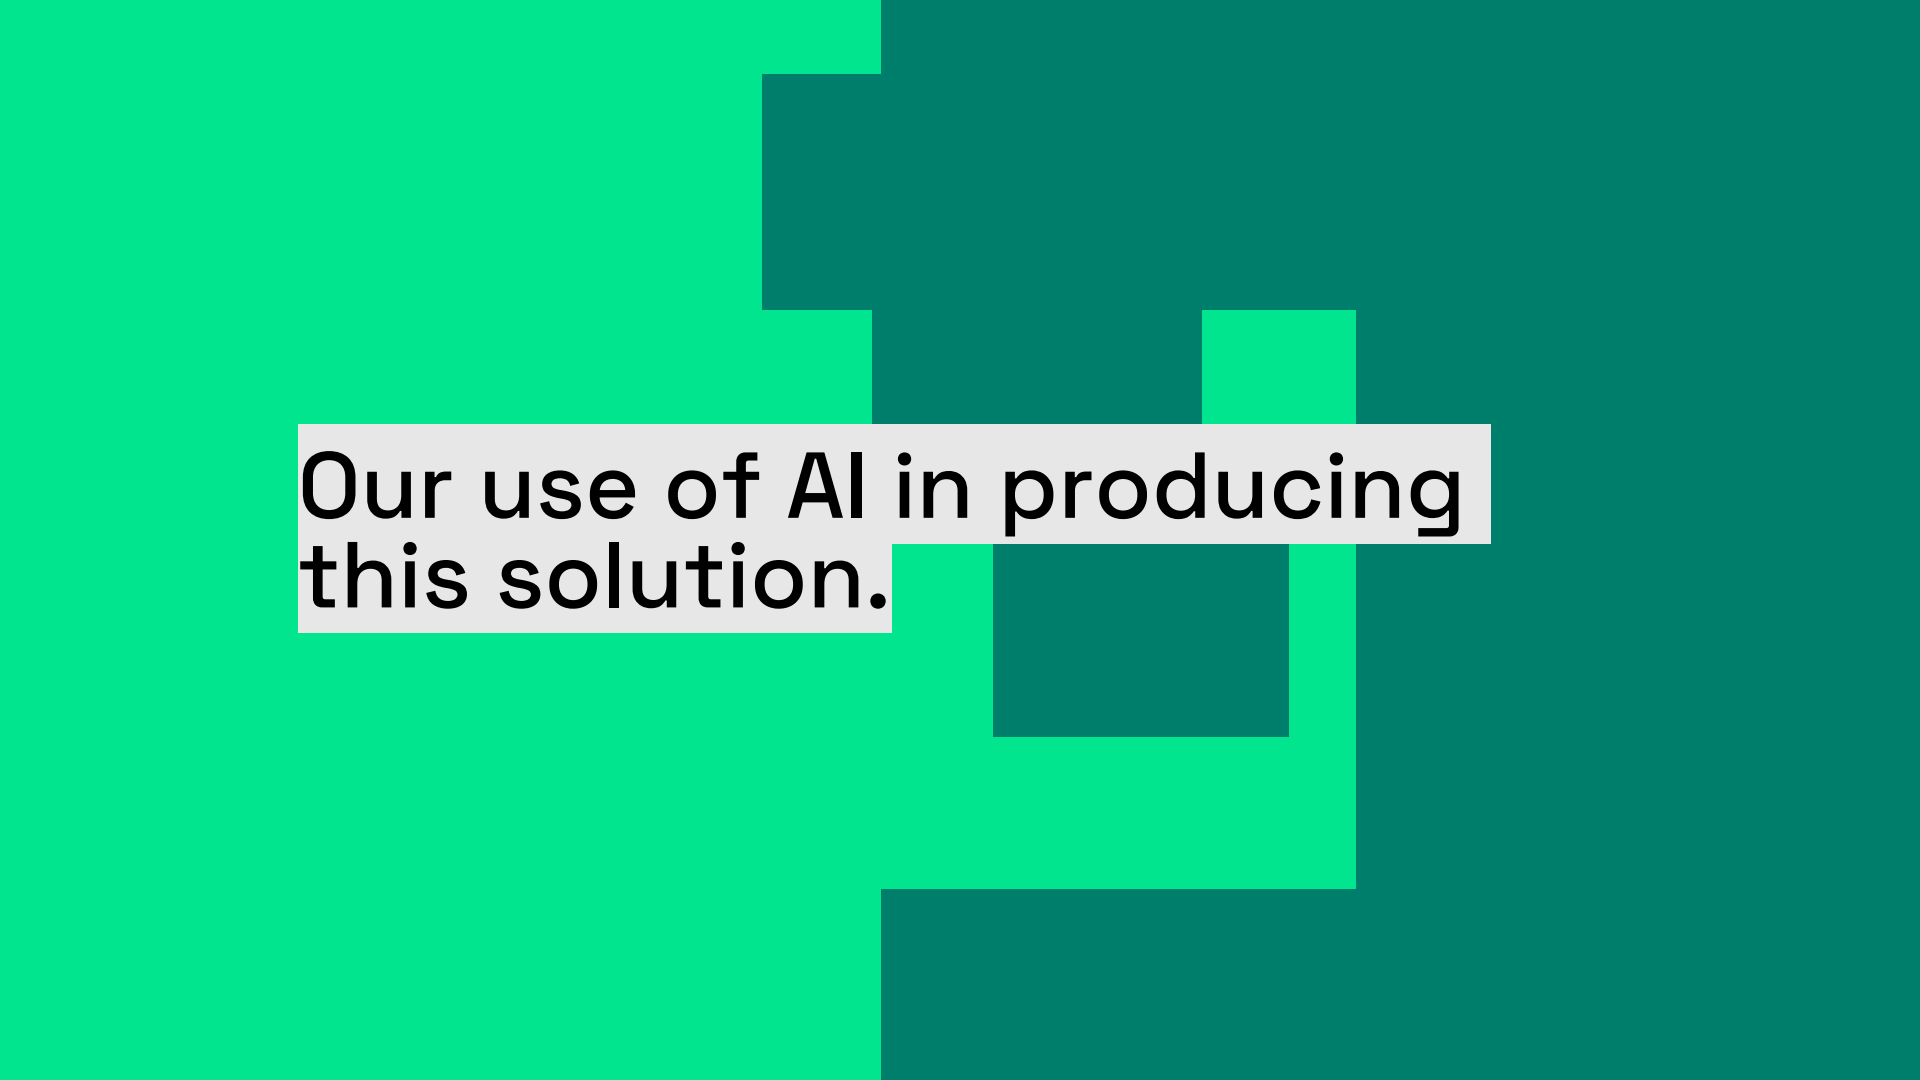

- Glass Devtools: product owner.
- Users and Contributors.
- Security - risks handling sensitive data
- Performance - risking responsiveness
- Maintainability - risks increased complexity
- Documentation - adds additional work

Our alternative approach

- An AI based solution, to our AI problem.
- More responsive
- More complex
- More costly

How would this affect the project?

- Security - additional external calls
- Performance - risking responsiveness, increases traffic
- Maintainability - Massively more complex
- Modularity - builds directly off existing, complex modules.
- Documentation - adds additional work

Our use of AI in producing
this solution.

What we learned.

THANK
YOU!
